

Canton Network: SecLending settlement using the CDM

The Canton Network Today

>\$3.6T

of tokenized real-world assets

\$2.7T

of syndicated loan commitments

\$1.5T

of repo transactions every month

Top 10

leading global investment banks
use Canton applications today

USDC/USYC

Largest stable coin provider and
largest tokenized money market
fund on Canton

~\$230T

market opportunity to mobilize
collateral via RWA tokenization

**The Canton Network is a
public-permissioned layer 1
blockchain with the privacy and
control features critical for
regulated financial markets**

**Launched with 45+
leading organizations**

Privacy

In Canton, only stakeholders to a transaction see, validate and record their parts of a transaction, even when it spans multiple applications.

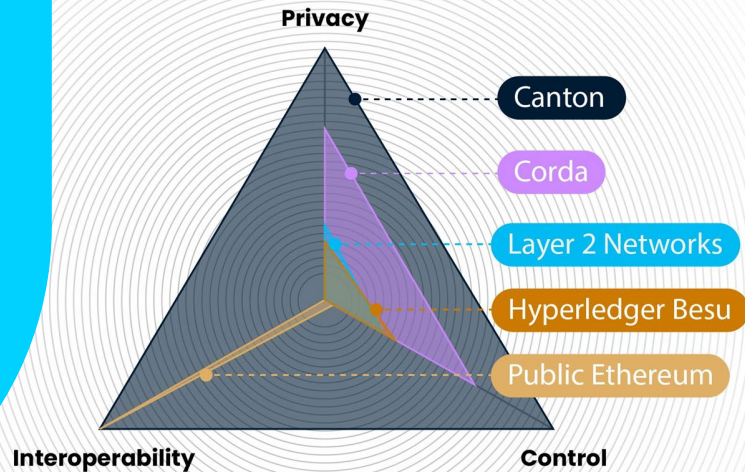

Independent control

Other public networks force you to give up control to shared validators. Canton puts it squarely in your hands.

Native interoperability

Uniquely enables atomic smart contract calls with privacy across independently operated subnets for real-time sync and risk-free settlement across networks.
